

# TRI-DIMENSIONAL ANALYSIS

## NETEZZA WORKLOAD HEALTH CHECK

Our EDW/Netezza experts suggest conducting a Tri-Dimensional Analysis on all Netezza systems. Our unified goal is to ensure overall health and wellness on the box, in conjunction with assisting on any pain-points you may have.

### OUR PURPOSE

The Analysis is designed to inform you, and your team on the overall health of your current Netezza system.

*It contains two parts – one being the overall view into your workload high-level, and the other a deeper view into each individual username.*

### THE PROCESS

We send over a script that collects 365 days' worth of performance data – for you to send back. This should take roughly 5 minutes to run.

*The data that we collect is purely performance metrics and does not contain any sensitive information. You have full access to review the scripts prior as well.*

### YOUR PAYOUT

Our teams will analyze the data based on three workload dimensions (Month of Year, Day of Week, and Hour of Day) in context of query volume, query queue-time, and query run-time on average across the entirety of the data collected.

Let's put smart to work™
