1) Please create a new empty directory on your Netezza host called "trid".
2) Copy the attached file, tri-d.tar.gz, into the new "trid" directory.
3) Then, run the following two commands to extract and run the Tri-Dimensional Analysis collection scripts:
tar xvzf tri-d.tar.gz
./runtrid.sh

It may take a few minutes for the script to run. When the script completes, it will create an output file, trid_output.zip. Please send us this output, and then you may delete the "trid" directory with the collection scripts and output.
